Open the OneView mapping program directly from our website.

The County’s online GIS mapping program will launch. You must Accept to use.
Click on the icon that looks like a stack of papers. A new window will open displaying all of the map “layers” that are available in this application.

Click the box next to “Zoning” to turn on the Zoning information.
You can see all of the information within the Zoning layer by clicking on the carrot next to Zoning.

Different information within these layers are visible depending on whether you are zoomed in or out of the map. Once you click layers on, you can begin to see them as you zoom in.

If you do not know how to find the property in question by zooming into the map, you can search a number of ways using the search tool.
If you know the address or the tax key number you can also do a quick search in the upper search box. If you do not have that information, you can click on the looking glass symbol. The “Search Type” window will default to “Parcel”, but you can use the menu drop down to change the search type to other items such as an owner’s name or an address.

This example takes you to property owned by the Town of Delavan. Once you are zoomed into the property, you will see your zoning. Each zone district is identified by a letter and a number. If the property is in the Shoreland Zone, it has blue hash marks overlain, as is shown on the left portion of this map view.

If you have questions once you have found your zone district information, you can call our office at 262-742-4972.
